

# **Test Report**

This test report describes the test results of the below mentioned paragliding harness.

All the tests were carried out by:

Air Turquoise SA, official test laboratory of Switzerland.

#### **Standards**

Tests were carried out in conformity with the following standards:

- 2. DV LuftGerPV §1, Nr. 7 C (\*note: in what follows this will be abbreviated by "LTF")
- European Standard EN1651 September 1999 (\*note in what follows this will be abbreviated by "EN")
- European Standard EN12491 September 2001 (\*note in what follows this will be abbreviated by "EN12491")

#### Harness details

Manufacturer: AIR MKG Kortel Design

Harness model: Kruyer 2
Size: Medium
Harness Weight: 320 gr

Maximum certified pilot 100 kg EN / 130 kg LTF

Impact protection type: NA or Air Bag

Harness type: ABS

Test responsible:

Test place:

Villeneuve

June 27, 2013

Test room temp ? humidity: 25.2° C: 54.9/r/

Test room temp & humidity: 25,3° C; 54 %rel Certification number EN: PH 073,2013

Certification number LTF: GZ 073.2013

#### **Test summary**

#### A. STRUCTURAL STRENGHT TESTS

A test plan was set up in order to execute the different tests in an efficient order. The table below summarizes this test plan together with the applicable standards and results.

		Standa	ard Ref.	d	Anchoring		Forces		Min.	
Test ID	TESTED?	EN	LTF	TEST setup	Attach - ment points	Dummy	Req. Load in g	Min. force [N]	Test durat ion [sec]	Result
1 2	<b>&gt; &gt;</b>	5.3.2.1 5.3.2.2	4.2.1.a	Default flying position	2 main attachment points	Hip fixated	6g 9g 15g	6000 9000 15000	10 5	OK OK
3	✓	5.3.2.7	4.2.1.b	Default, landing position	2 main att. points	Hip fixated, landing conf.	6g	6000 15000	10 5	OK OK

12	! !		4.2.1.c rescue	Upside down rescue	2 rescue att. downw.	Head fix.	6g	6000	10	n/a

#### **B. HARNESS PROTECTION SHOCK TEST**

Most paraglider harnesses are equipped with a protection device that damps the shock on the pilot's spine during a hard landing.

Shock impact tests have to be executed on these harnesses in order to prove the damping characteristics of it.

## C. RESCUE DEPLOYMENT RESISTANCE TEST

The deployment of the rescue system has to be ensured in all circumstances of flight. This test is to verify whether the force needed to deploy is in between reasonable limits.

Test ID	TESTED?	Standa rd Ref. LTF		Anchoring  Attach- ment points  E		Force for sir Min. force [N]	ngle har i iviax. force [N]	d deployment Resistance measured IdaN1	Result

#### D. RESCUE DEPLOYMENT STRAP STRENGHT TEST

The connection between handgrip and inner container has to have sufficient load capacity/structural strength in any situation that may arise during normal use. During this test is verified, whether this connection fulfill the requirements.

Test ID	TESTED?	Standa LTF	ard Ref. EN 12491	TEST setup	Minimum force [N]	Min. Test durati on [s]	Breaking resistance measured	Result

**Test ID Protect** Protector shock test

I tem: Kruyer 2

Manufacturer AIR MKG Kortel Design

Test place & date: Villeneuve June 27, 2013

Test responsible: Alain Zoller Temp. [°C] & Humidity: 25.3° C: 54 %rel Maximum certified pilot weight [kg]: kg

Standard 2. DV LuftGerPV §1, Nr. 7 c

Test standard §: 5.1.1

Harness attached to protector test dummy, in a similar way like a Test setup:

real pilot in flight.

Impact will be simulated by dropping the dummy from a certain

height (with and without reserve).

To simulate the "in-flight" conditions, the airbag is inflated with

pressurized air equalling an airspeed of 7m/s. Inflation has to be

stopped at least 5 sec before impact.

Impact will be measured by an accelerometer mounted on the

dummy. (Impact measured in g's)

1.65 m (between lowest point test dummy and impact surface) Requirements: Minimun height:

**Impact** 

requirements:

+50g as absolute maximum;

+38g during less than 7 msec;

+20g during less than 25 msec.

Repetitions: The test will be performed 2 times, minimum 1 hour and

maximum 2 hours after the first impact (with airbag protectors this pause is not necessary). The 2 Max-values should not differ

more than 20%

#### Results

#### Shock test 1:

Impact at a height of 1.65m:

Impact duration of + 38 g (if any):

Impact duration of +20 g (if any):

26.592 -

0 0.01812

 $\Delta < 20 \%$ ?

### Shock test 2:

Impact at a height of 1.65m:

25.42

Impact duration of + 38 g (if any):

0

Impact duration of +20 g (if any):

0.01487

Test Result:

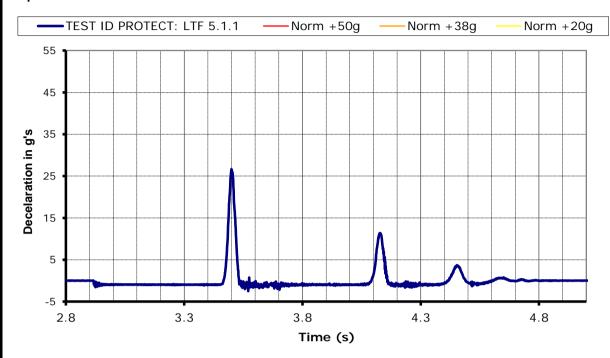

**Passed**
