Test laboratory for paragliders, paraglider harnesses and paraglider reserve parachutes

Flight test report: EN 926-2:2013 & LTF 91/09

g toot .op	J. H. J. H. J.				
Manufacturer Davinci Products Inc.		Certification number	F	PG_1332.2018	
Address	53 sinchon-gil, Okcheon- myeon, Yangpyeong-gun 12505 Gyeonggi-do Republic of Korea	Flight test	20.12.2017		
Glider model XCHORD M		Classification	D		
Serial number XC17M-174004		Representative	١	None	
Trimmer no		Place of test	\	Villeneuve	
Folding lines used yes			-		
Test pilot		Claude Thurnheer	A	slain Zoller	
Harness		Niviuk -	(Gin Gliders -	
Harness to risers distance (cm)		44	4	43	
Distance between risers (cm)		44		46	
Total weight in flight (kg)		85		105	
rotal worght in mgr	·· (··g)				
1. Inflation/Take-off		С			
Rising behaviour		Overshoots, shall be slowed down to avoid a front collapse	С	Overshoots, shall be slowed down to avoid a front collapse	С
Special take off technique	required	No	Α	No	Α
2. Landing		Α			
Special landing technique required		No	Α	No	Α
3. Speed in straight flight		В			
Trim speed more than 30 km/h		Yes	Α	Yes	Α
Speed range using the controls larger than 10 km/h		Yes	Α -	Yes	Α -
Minimum speed		25 km/h to 30 km/h	В	25 km/h to 30 km/h	В
4. Control movement	00 km	С			
Max. weight in flight up to 80 kg		not available	0	not available	0
Symmetric control pressure / travel		Hot available	U	not available	U
Max. weight in flight 80 kg to 100 kg Symmetric control pressure / travel		Increasing / greater than 60 cm	Α	not available	0
Max. weight in flight greater than 100 kg		moreasing / greater than see on	,,	not available	·
Symmetric control pressure / travel		not available	0	Increasing / 50 cm to 65 cm	С
5. Pitch stability exiting		A		3 77 77 77 77	_
Dive forward angle on exit	· · · · · · · · · · · · · · · · · · ·	Dive forward less than 30°	Α	Dive forward less than 30°	Α
Collapse occurs		No	Α	No	Α
6. Pitch stability operating controls during accelerated flight		Α			
Collapse occurs		No	Α	No	Α
7. Roll stability and dam	ping	A			
Oscillations		Reducing	Α	Reducing	Α
8. Stability in gentle spirals		Α			
Tendency to return to straight flight		Spontaneous exit	Α	Spontaneous exit	Α
9. Behaviour exiting a fully developed spiral dive		D			
Initial response of glider (first 180°)		No immediate reaction	В	No immediate reaction	В
Tendency to return to stra	ight flight	Turn remains constant (g force constant, rate of turn constant)	D	Turn remains constant (g force constant, rate of turn constant)	D
Turn angle to recover norr	mal flight	With pilot action	D	With pilot action	D
10. Symmetric front collapse		D			
Approximately 30 % chord		Rocking back less than 45°	Α	Rocking back less than 45°	Α

Recovery	Recovery through pilot action in less than a further 3 s	D	Recovery through pilot action in less than a further 3 s	D
Dive forward angle on exit Change of course	Dive forward 0° to 30° Keeping course	Α	Dive forward 0° to 30° Keeping course	Α
Cascade occurs	No	Α	No	Α
Folding lines used	Yes		Yes	
At least 50% chord				
Entry	Rocking back less than 45°	Α	Rocking back less than 45°	Α
Recovery	Recovery through pilot action in less than a further 3 s	D	Recovery through pilot action in less than a further 3 s	D
Dive forward angle on exit / Change of course	Dive forward 0° to 30° / Keeping course	Α	Dive forward 30° to 60° / Keeping course	В
Cascade occurs	No	Α	No	Α
Folding lines used	Yes		Yes	
With accelerator				
Entry	Rocking back less than 45°	Α	Rocking back greater than 45°	С
Recovery	Recovery through pilot action in less than a further 3 s	D	Recovery through pilot action in less than a further 3 s	D
Dive forward angle on exit / Change of course	Dive forward 0° to 30° / Keeping course	Α	Dive forward 30° to 60° / Keeping course	В
Cascade occurs	No	Α	No	Α
Folding lines used	Yes		Yes	
11. Exiting deep stall (parachutal stall)	A			
Deep stall achieved	Yes	Α	Yes	Α
Recovery	Spontaneous in less than 3 s	Α	Spontaneous in less than 3 s	Α
Dive forward angle on exit	Dive forward 0° to 30°	Α	Dive forward 0° to 30°	Α
Change of course	Changing course less than 45°	Α	Changing course less than 45°	Α
Cascade occurs	No	Α	No	Α
12. High angle of attack recovery	D			
Recovery	Spontaneous in 3 s to 5 s	С	Recovery through pilot action in less than a further 3 s	D
			1000 than a farther 0.0	
Cascade occurs	No	Α		Α
	No C	Α		Α
13. Recovery from a developed full stall		A		A
13. Recovery from a developed full stall Dive forward angle on exit	C Dive forward 0° to 30°		No Dive forward 0° to 30°	
13. Recovery from a developed full stall Dive forward angle on exit Collapse	С	Α	No	Α
13. Recovery from a developed full stall Dive forward angle on exit Collapse Cascade occurs (other than collapses)	C Dive forward 0° to 30° No collapse No	A A	No Dive forward 0° to 30° No collapse	A A
13. Recovery from a developed full stall Dive forward angle on exit Collapse Cascade occurs (other than collapses) Rocking back	C Dive forward 0° to 30° No collapse No Less than 45°	A A A	No Dive forward 0° to 30° No collapse No Greater than 45°	A A A
13. Recovery from a developed full stall Dive forward angle on exit Collapse Cascade occurs (other than collapses) Rocking back Line tension	C Dive forward 0° to 30° No collapse No	A A A	No Dive forward 0° to 30° No collapse No	A A A
13. Recovery from a developed full stall Dive forward angle on exit Collapse Cascade occurs (other than collapses) Rocking back Line tension 14. Asymmetric collapse	C Dive forward 0° to 30° No collapse No Less than 45° Most lines tight	A A A	No Dive forward 0° to 30° No collapse No Greater than 45°	A A A
13. Recovery from a developed full stall Dive forward angle on exit Collapse Cascade occurs (other than collapses) Rocking back Line tension	C Dive forward 0° to 30° No collapse No Less than 45° Most lines tight	A A A	No Dive forward 0° to 30° No collapse No Greater than 45°	A A A
13. Recovery from a developed full stall Dive forward angle on exit Collapse Cascade occurs (other than collapses) Rocking back Line tension 14. Asymmetric collapse Small asymmetric collapse Change of course until re-inflation / Maximum dive forward or	C Dive forward 0° to 30° No collapse No Less than 45° Most lines tight D Less than 90° / Dive or roll angle	A A A A	No Dive forward 0° to 30° No collapse No Greater than 45° Most lines tight Less than 90° / Dive or roll angle	A A C A
13. Recovery from a developed full stall Dive forward angle on exit Collapse Cascade occurs (other than collapses) Rocking back Line tension 14. Asymmetric collapse Small asymmetric collapse Change of course until re-inflation / Maximum dive forward or roll angle	C Dive forward 0° to 30° No collapse No Less than 45° Most lines tight D Less than 90° / Dive or roll angle 15° to 45° Inflates in less than 3 s from start of	A A A A	No Dive forward 0° to 30° No collapse No Greater than 45° Most lines tight Less than 90° / Dive or roll angle 15° to 45°	A A C A
13. Recovery from a developed full stall Dive forward angle on exit Collapse Cascade occurs (other than collapses) Rocking back Line tension 14. Asymmetric collapse Small asymmetric collapse Change of course until re-inflation / Maximum dive forward or roll angle Re-inflation behaviour	C Dive forward 0° to 30° No collapse No Less than 45° Most lines tight D Less than 90° / Dive or roll angle 15° to 45° Inflates in less than 3 s from start of pilot action	A A A A A C	No Dive forward 0° to 30° No collapse No Greater than 45° Most lines tight Less than 90° / Dive or roll angle 15° to 45° Spontaneous re-inflation	A A C A
13. Recovery from a developed full stall Dive forward angle on exit Collapse Cascade occurs (other than collapses) Rocking back Line tension 14. Asymmetric collapse Small asymmetric collapse Change of course until re-inflation / Maximum dive forward or roll angle Re-inflation behaviour Total change of course	C Dive forward 0° to 30° No collapse No Less than 45° Most lines tight D Less than 90° / Dive or roll angle 15° to 45° Inflates in less than 3 s from start of pilot action Less than 360° No (or only a small number of collapsed cells with a spontaneous	A A A A A C A	No Dive forward 0° to 30° No collapse No Greater than 45° Most lines tight Less than 90° / Dive or roll angle 15° to 45° Spontaneous re-inflation Less than 360° No (or only a small number of collapsed cells with a spontaneous	A A C A A A
13. Recovery from a developed full stall Dive forward angle on exit Collapse Cascade occurs (other than collapses) Rocking back Line tension 14. Asymmetric collapse Small asymmetric collapse Change of course until re-inflation / Maximum dive forward or roll angle Re-inflation behaviour Total change of course Collapse on the opposite side occurs	C Dive forward 0° to 30° No collapse No Less than 45° Most lines tight D Less than 90° / Dive or roll angle 15° to 45° Inflates in less than 3 s from start of pilot action Less than 360° No (or only a small number of collapsed cells with a spontaneous reinflation)	A A A A A A A A A A A A A A A A A A A	No Dive forward 0° to 30° No collapse No Greater than 45° Most lines tight Less than 90° / Dive or roll angle 15° to 45° Spontaneous re-inflation Less than 360° No (or only a small number of collapsed cells with a spontaneous reinflation)	A A A A A A A
13. Recovery from a developed full stall Dive forward angle on exit Collapse Cascade occurs (other than collapses) Rocking back Line tension 14. Asymmetric collapse Small asymmetric collapse Change of course until re-inflation / Maximum dive forward or roll angle Re-inflation behaviour Total change of course Collapse on the opposite side occurs Twist occurs Cascade occurs	C Dive forward 0° to 30° No collapse No Less than 45° Most lines tight D Less than 90° / Dive or roll angle 15° to 45° Inflates in less than 3 s from start of pilot action Less than 360° No (or only a small number of collapsed cells with a spontaneous reinflation) No	A A A A A A A A A A A A A A A A A A A	No Dive forward 0° to 30° No collapse No Greater than 45° Most lines tight Less than 90° / Dive or roll angle 15° to 45° Spontaneous re-inflation Less than 360° No (or only a small number of collapsed cells with a spontaneous reinflation) No	A A A A A A
13. Recovery from a developed full stall Dive forward angle on exit Collapse Cascade occurs (other than collapses) Rocking back Line tension 14. Asymmetric collapse Small asymmetric collapse Change of course until re-inflation / Maximum dive forward or roll angle Re-inflation behaviour Total change of course Collapse on the opposite side occurs Twist occurs Cascade occurs Folding lines used	C Dive forward 0° to 30° No collapse No Less than 45° Most lines tight D Less than 90° / Dive or roll angle 15° to 45° Inflates in less than 3 s from start of pilot action Less than 360° No (or only a small number of collapsed cells with a spontaneous reinflation) No No	A A A A A A A A A A A A A A A A A A A	No Dive forward 0° to 30° No collapse No Greater than 45° Most lines tight Less than 90° / Dive or roll angle 15° to 45° Spontaneous re-inflation Less than 360° No (or only a small number of collapsed cells with a spontaneous reinflation) No No	A A A A A A
13. Recovery from a developed full stall Dive forward angle on exit Collapse Cascade occurs (other than collapses) Rocking back Line tension 14. Asymmetric collapse Small asymmetric collapse Change of course until re-inflation / Maximum dive forward or roll angle Re-inflation behaviour Total change of course Collapse on the opposite side occurs Twist occurs Cascade occurs	C Dive forward 0° to 30° No collapse No Less than 45° Most lines tight D Less than 90° / Dive or roll angle 15° to 45° Inflates in less than 3 s from start of pilot action Less than 360° No (or only a small number of collapsed cells with a spontaneous reinflation) No No	A A A A A A A A A A A A A A A A A A A	No Dive forward 0° to 30° No collapse No Greater than 45° Most lines tight Less than 90° / Dive or roll angle 15° to 45° Spontaneous re-inflation Less than 360° No (or only a small number of collapsed cells with a spontaneous reinflation) No No	A A A A A A
13. Recovery from a developed full stall Dive forward angle on exit Collapse Cascade occurs (other than collapses) Rocking back Line tension 14. Asymmetric collapse Small asymmetric collapse Change of course until re-inflation / Maximum dive forward or roll angle Re-inflation behaviour Total change of course Collapse on the opposite side occurs Twist occurs Cascade occurs Folding lines used Large asymmetric collapse Change of course until re-inflation / Maximum dive forward or	C Dive forward 0° to 30° No collapse No Less than 45° Most lines tight D Less than 90° / Dive or roll angle 15° to 45° Inflates in less than 3 s from start of pilot action Less than 360° No (or only a small number of collapsed cells with a spontaneous reinflation) No No Yes Less than 90° / Dive or roll angle	A A A A A A A A A A A A A A A A A A A	No Dive forward 0° to 30° No collapse No Greater than 45° Most lines tight Less than 90° / Dive or roll angle 15° to 45° Spontaneous re-inflation Less than 360° No (or only a small number of collapsed cells with a spontaneous reinflation) No No Yes Less than 90° / Dive or roll angle	A A A A A A
13. Recovery from a developed full stall Dive forward angle on exit Collapse Cascade occurs (other than collapses) Rocking back Line tension 14. Asymmetric collapse Small asymmetric collapse Change of course until re-inflation / Maximum dive forward or roll angle Re-inflation behaviour Total change of course Collapse on the opposite side occurs Twist occurs Cascade occurs Folding lines used Large asymmetric collapse Change of course until re-inflation / Maximum dive forward or roll angle	C Dive forward 0° to 30° No collapse No Less than 45° Most lines tight D Less than 90° / Dive or roll angle 15° to 45° Inflates in less than 3 s from start of pilot action Less than 360° No (or only a small number of collapsed cells with a spontaneous reinflation) No No Yes Less than 90° / Dive or roll angle 45° to 60° Inflates in less than 3 s from start of	A A A A A A A A A A A A A A A A A A A	No Dive forward 0° to 30° No collapse No Greater than 45° Most lines tight Less than 90° / Dive or roll angle 15° to 45° Spontaneous re-inflation Less than 360° No (or only a small number of collapsed cells with a spontaneous reinflation) No No Yes Less than 90° / Dive or roll angle 60° to 90°	A A A A A A D
13. Recovery from a developed full stall Dive forward angle on exit Collapse Cascade occurs (other than collapses) Rocking back Line tension 14. Asymmetric collapse Small asymmetric collapse Change of course until re-inflation / Maximum dive forward or roll angle Re-inflation behaviour Total change of course Collapse on the opposite side occurs Twist occurs Cascade occurs Folding lines used Large asymmetric collapse Change of course until re-inflation / Maximum dive forward or roll angle Re-inflation behaviour	C Dive forward 0° to 30° No collapse No Less than 45° Most lines tight D Less than 90° / Dive or roll angle 15° to 45° Inflates in less than 3 s from start of pilot action Less than 360° No (or only a small number of collapsed cells with a spontaneous reinflation) No No Yes Less than 90° / Dive or roll angle 45° to 60° Inflates in less than 3 s from start of pilot action	A A A A A A A C C C	No Dive forward 0° to 30° No collapse No Greater than 45° Most lines tight Less than 90° / Dive or roll angle 15° to 45° Spontaneous re-inflation Less than 360° No (or only a small number of collapsed cells with a spontaneous reinflation) No No Yes Less than 90° / Dive or roll angle 60° to 90° Spontaneous re-inflation	A A A A A A A A A A A A A A A A A A A
13. Recovery from a developed full stall Dive forward angle on exit Collapse Cascade occurs (other than collapses) Rocking back Line tension 14. Asymmetric collapse Small asymmetric collapse Change of course until re-inflation / Maximum dive forward or roll angle Re-inflation behaviour Total change of course Collapse on the opposite side occurs Twist occurs Cascade occurs Folding lines used Large asymmetric collapse Change of course until re-inflation / Maximum dive forward or roll angle Re-inflation behaviour Total change of course	C Dive forward 0° to 30° No collapse No Less than 45° Most lines tight D Less than 90° / Dive or roll angle 15° to 45° Inflates in less than 3 s from start of pilot action Less than 360° No (or only a small number of collapsed cells with a spontaneous reinflation) No No Yes Less than 90° / Dive or roll angle 45° to 60° Inflates in less than 3 s from start of pilot action Less than 360°	A A A A A A A A A A A A A A A A A A A	No Dive forward 0° to 30° No collapse No Greater than 45° Most lines tight Less than 90° / Dive or roll angle 15° to 45° Spontaneous re-inflation Less than 360° No (or only a small number of collapsed cells with a spontaneous reinflation) No No Yes Less than 90° / Dive or roll angle 60° to 90° Spontaneous re-inflation Less than 360°	A A A A A A A A A A A A A A A A A A A
13. Recovery from a developed full stall Dive forward angle on exit Collapse Cascade occurs (other than collapses) Rocking back Line tension 14. Asymmetric collapse Small asymmetric collapse Change of course until re-inflation / Maximum dive forward or roll angle Re-inflation behaviour Total change of course Collapse on the opposite side occurs Twist occurs Cascade occurs Folding lines used Large asymmetric collapse Change of course until re-inflation / Maximum dive forward or roll angle Re-inflation behaviour Total change of course until re-inflation / Maximum dive forward or roll angle Re-inflation behaviour	C Dive forward 0° to 30° No collapse No Less than 45° Most lines tight D Less than 90° / Dive or roll angle 15° to 45° Inflates in less than 3 s from start of pilot action Less than 360° No (or only a small number of collapsed cells with a spontaneous reinflation) No No Yes Less than 90° / Dive or roll angle 45° to 60° Inflates in less than 3 s from start of pilot action Less than 360° Yes, no turn reversal	A A A A A A A A A A A A A A A A A A A	No Dive forward 0° to 30° No collapse No Greater than 45° Most lines tight Less than 90° / Dive or roll angle 15° to 45° Spontaneous re-inflation Less than 360° No (or only a small number of collapsed cells with a spontaneous reinflation) No No Yes Less than 90° / Dive or roll angle 60° to 90° Spontaneous re-inflation Less than 360° Yes, no turn reversal	A A A A A A A A A A A A A A A A A A A
13. Recovery from a developed full stall Dive forward angle on exit Collapse Cascade occurs (other than collapses) Rocking back Line tension 14. Asymmetric collapse Small asymmetric collapse Change of course until re-inflation / Maximum dive forward or roll angle Re-inflation behaviour Total change of course Collapse on the opposite side occurs Twist occurs Cascade occurs Folding lines used Large asymmetric collapse Change of course until re-inflation / Maximum dive forward or roll angle Re-inflation behaviour Total change of course Collapse on the opposite side occurs Total change of course Collapse on the opposite side occurs	C Dive forward 0° to 30° No collapse No Less than 45° Most lines tight D Less than 90° / Dive or roll angle 15° to 45° Inflates in less than 3 s from start of pilot action Less than 360° No (or only a small number of collapsed cells with a spontaneous reinflation) No No Yes Less than 90° / Dive or roll angle 45° to 60° Inflates in less than 3 s from start of pilot action Less than 360° Yes, no turn reversal No	A A A A A A A A A A A A A A A A A A A	Dive forward 0° to 30° No collapse No Greater than 45° Most lines tight Less than 90° / Dive or roll angle 15° to 45° Spontaneous re-inflation Less than 360° No (or only a small number of collapsed cells with a spontaneous reinflation) No No Yes Less than 90° / Dive or roll angle 60° to 90° Spontaneous re-inflation Less than 360° Yes, no turn reversal No	A A A A A A A A A A A A A A A A A A A

Small asymmetric collapse with fully activated accelerator				
Change of course until re-inflation / Maximum dive forward or roll angle	Less than 90° / Dive or roll angle 15° to 45°	Α	Less than 90° / Dive or roll angle 0° to 15°	Α
Re-inflation behaviour	Inflates in less than 3 s from start of pilot action	С	Inflates in 3 s to 5 s from start of pilot action	D
Total change of course	Less than 360°	Α	Less than 360°	Α
Collapse on the opposite side occurs	No (or only a small number of collapsed cells with a spontaneous reinflation)	Α	Yes, no turn reversal	С
Twist occurs	No	Α	No	Α
Cascade occurs	No	Α	No	Α
Folding lines used	Yes		Yes	
Large asymmetric collapse with fully activated accelerator				
Change of course until re-inflation / Maximum dive forward or roll angle	90° to 180° / Dive or roll angle 15° to 45°	В	90° to 180° / Dive or roll angle 15° to 45°	В
Re-inflation behaviour	Inflates in less than 3 s from start of pilot action	С	Inflates in 3 s to 5 s from start of pilot action	D
Total change of course	Less than 360°	Α	Less than 360°	Α
Collapse on the opposite side occurs	No (or only a small number of collapsed cells with a spontaneous reinflation)	Α	No (or only a small number of collapsed cells with a spontaneous reinflation)	Α
Twist occurs	No	Α	No	Α
Cascade occurs	No	Α	No	Α
Folding lines used	Yes		Yes	
15. Directional control with a maintained asymmetric collapse	A			
Able to keep course	Yes	Α	Yes	Α
180° turn away from the collapsed side possible in 10 s	Yes	Α	Yes	Α
Amount of control range between turn and stall or spin	More than 50 % of the symmetric control travel	Α	More than 50 % of the symmetric control travel	Α
16. Trim speed spin tendency	Α			
Spin occurs	No	Α	No	Α
17. Low speed spin tendency	D			
Spin occurs	Yes	D	No	Α
18. Recovery from a developed spin	B	_	2	_
Spin rotation angle after release	Stops spinning in 90° to 180°	В	Stops spinning in 90° to 180°	В
Cascade occurs	No 0	Α	No	Α
19. B-line stall Change of course before release	not available	0	not available	0
Behaviour before release	not available	0	not available	0
Recovery	not available	0	not available	0
Dive forward angle on exit	not available	0	not available	0
Cascade occurs	not available	0	not available	0
20. Big ears	В			
Entry procedure	Dedicated controls	Α	Dedicated controls	Α
Behaviour during big ears	Stable flight	Α	Stable flight	Α
Recovery	Spontaneous in 3 s to 5 s	В	Spontaneous in 3 s to 5 s	В
Dive forward angle on exit	Dive forward 0° to 30°	Α	Dive forward 0° to 30°	Α
21. Big ears in accelerated flight	В			
Entry procedure	Dedicated controls	Α	Dedicated controls	Α
Behaviour during big ears	Stable flight	Α	Stable flight	Α
Recovery	Recovery through pilot action in less than a further 3 s	В	Recovery through pilot action in less than a further 3 s	В
Dive forward angle on exit	Dive forward 0° to 30°	Α	Dive forward 0° to 30°	Α
Behaviour immediately after releasing the accelerator while maintaining big ears	Stable flight	Α	Stable flight	Α
22. Alternative means of directional control				
	Α			
180° turn achievable in 20 s	Yes	Α	Yes	Α
180° turn achievable in 20 s Stall or spin occurs 23. Any other flight procedure and/or configuration		A A	Yes No	A A

Procedure works as described	not available	0	not available	0
Procedure suitable for novice pilots	not available	0	not available	0
Cascade occurs	not available	0	not available	0

24. Comments of test pilot
