[^0] uncertainty by the coverage factor $\mathrm{k}=2$. The value of the measurand lies within the assigned range of values with a probability of $95 \%$.
${ }^{(2)}$ The dummy is lifted minimum up to 1.65 m , and impact pad is mounted on. Where the impact occurs, measure distance from bottom of impact pad to ground.
${ }^{(3)}$ Maximum peak of impact should be less or equal to $50[\mathrm{~g}],{ }^{(4)}$ If any, the maximum duration in at 38 [ g ] should be less or equal to 7 [ ms ], ${ }^{(5)}$ If any, the maximum duration in at 20 [g] should be less or equal to 25 [ms]. ${ }^{(6)}$ The test should be done twice, and the 2 nd test the maximum peak should not differe more than $20 \%$ from the first test, maximum peak.
